Kosher Material Transportation

Procter & Gamble Chemicals uses a Kosher tank truck fleet for the shipment of all kosher Chemical products. We do provide a kosher wash prior to loading any kosher material. The same kosher wash is used for both KNP (Kosher not for Passover) and KPO (Kosher for Passover) material.

The Orthodox Union has a long standing policy that a clean (Kosher washed) KNP truck can transport KPO material as long as the prior loads were not grain derived, (wheat, rye, oats, barley, and spelt) even if the product was made from non Passover approved material (corn, soy, rapeseed, sunflower, canola). P&G has established strict prior cargo guidelines with Carry in order to meet the OU requirement. Our transportation documents have been updated to reflect the kosher status of the material and the vehicle.
